

User Story #1

As an API user, I want to manage products via API so that my department can create, update and delete products via Postman.

Acceptance Criteria

- # Be able to create, update and delete products;
- # A product cannot be duplicated;
- # The data should be persisted for a future search;
- # API should be documented;

Suggestions

- # Backend should be done preferably with .NET Core, but other languages and frameworks are welcome;
- # The code should be published in github or gitlab.
